4. The following is a statement of reasons for the indication of allowable subject matter:

A network management system (NMS) provides operators with a full range of configuration capabilities on multi-technology communications networks. The service director application logon authentication performs user validation and prevents multiple logon of identical user IDs. However, the prior art of record fails to teach or suggest individually or in combination as stated in claims 10, 12, 13, 15, and 16 "accessing a team session file corresponding to the user identification and including current NMS server connection information, connecting the NMS client to an NMS server using the current NMS server connection information included in the team session file, and saving the current NMS server connection information and the user identification in the team session file" and in combination with other limitations as set forth in the independent claims. Claims 11, 17, and 23-28 are allowed due to dependent claims.
